

A world map illustrating the global distribution of the genus *Equisetum*. The map uses a color-coded system: green for regions where the genus is present and grey for regions where it is absent. The genus is found in North America (including Alaska and Mexico), Central America, the Caribbean, South America (primarily Brazil and Argentina), Europe, North Africa, the Middle East, Central Asia, China, India, Southeast Asia, and Australia. It is absent from most of Africa, South America (primarily Chile and Peru), and parts of Australia and the Pacific Islands.
